BELLTECH MODEL TM48 Post Hole Digger

TM48 Post Hole Digger Belltec Industries TM48 Post Hole Digger mounts easily on three-point tractors with over 28 horsepower which have at least two hydraulic remote valves. Our machine's design and performance go way beyond today's tractor mounted post hole diggers.

Our unique system transforms a three-point tractor into a drilling machine capable of doing what the big truck rigs do: drill accurate, straight holes (to a depth of 5 ft. on a single auger) in almost any drilling condition, including solid rock and concrete.

If drilling holes is a problem for you, we have the solution. Whether it is hard, dry ground, rocky soil or solid rock. We can drill it.

Frame-Guided Auger System Twin hydraulic cylinders connect the auger carriage to the mainframe of the machine. The cylinders move the carriage up and down the mainframe slides. Adjustable feet on the mainframe may be leveled. Since the auger is guided into the ground by the mainframe, as long as the mainframe is straight and the carriage is level, the machine will drill straight holes.
